

Description

The Portenta C33 is a powerful System-on-Module designed for low-cost Internet of Things (IoT) applications. Based on the R7FA6M5BH2CBG microcontroller from Renesas®, this board shares the same form factor as the Portenta H7 and it is backward compatible with it, making it fully compatible with all Portenta family shields and carriers through its high-density connectors. As a low-cost device, the Portenta C33 is an excellent choice for developers looking to create IoT devices and applications on a budget. Whether you're building a smart home device or a connected industrial sensor, the Portenta C33 provides the processing power and connectivity options you need to get the job done.

Target Areas

IoT, building automation, smart cities, and agriculture

1 Application Examples

Thanks to its high-performance processor, the Portenta C33 supports many applications. From industrial applications to rapid prototyping, IoT solutions, and building automation, among many others. Here are some application examples:

- **Industrial Automation:** The Portenta C33 can be implemented as a solution for different industrial applications, such as:
 - **Industrial IoT gateway:** Connect your devices, machines, and sensors to a Portenta C33 gateway. Collect real-time operation data and display them on an Arduino IoT Cloud dashboard, leveraging end-to-end secure data encryption.
 - **Machine monitoring to track OEE/OPE:** Track Overall Equipment Efficiency (OEE) and Overall Process Effectiveness (OPE) with the Portenta C33 as an IoT node. Collect data and get alerted on machine uptime and unplanned downtime to provide reactive maintenance and improve production rate.
 - **Inline Quality Assurance:** Leverage full compatibility between Portenta C33 and Nicla family to carry out quality control in your production lines. Collect Nicla smart sensing data with the Portenta C33 to catch defects early and resolve them before they travel down the line.
- **Prototyping:** The Portenta C33 can assist Portenta and MKR developers with their IoT prototypes by integrating ready-to-use Wi-Fi/Bluetooth® connectivity and various of peripheral interfaces, including CAN, SAI, SPI, and I2C. Moreover, the Portenta C33 can be promptly programmed with high-level languages like MicroPython, allowing for rapid prototyping of IoT applications.
- **Building Automation:** The Portenta C33 can be used in multiple building automation applications:
 - **Energy Consumption Monitoring:** Collect and monitor consumption data from all services (e.g., gas, water, electricity) in a single system. Display usage trends in Arduino IoT Cloud charts, providing an overall image for energy management optimization and cost reduction.
 - **Appliances Control System:** Leverage high-performing Portenta C33 microcontroller to real-time control your appliances. Adjust HVAC heating or improve the efficiency of your ventilation system, control the motors of your curtains, and switch on/off lights. The onboard Wi-Fi® connectivity easily allows Cloud integration, so that everything is under control even from remote.

2 Board Overview

The Portenta C33 is a powerful microcontroller board designed for low-cost IoT applications. Based on the high-performance R7FA6M5BH2CBG microcontroller from Renesas®, it offers a range of key features and a low-power design that make it well-suited for a variety of applications. The board has been designed with the same form factor as the Portenta H7 and is backward compatible, making it fully compatible with all Portenta family shields and carriers through its MKR-styled and high-density connectors. Table 1 summarizes the board's main features, Table 2, 3, 4, 5, and 6 shows more detailed information of the board's microcontroller, secure element, Ethernet transceiver, and external memory.

Feature	Description
Microcontroller	200MHz, Arm Cortex-M33 core microcontroller (R7FA6M5BH2CBG)
Internal Memory	2MB Flash and 256kB SRAM
External Memory	6MB QSPI Flash memory (MX25L12833F)
Connectivity	2.4GHz Wi-Fi (802.11 b/g/n) and Bluetooth® 5.0 (ESP32-C3-MINI-1U)
Ethernet	Ethernet physical layer (PHY) transceiver (LAN8742AI)
Security	IoT-ready secure element (SE050C2)
USB Connectivity	USB-C port for power and data (accessible also through the board's high-density connectors)
Power Supply	Various options for easily powering the board: USB-C port, single cell lithium-ion/lithium-polymer battery and external power supply connected through MKR-styled connectors
Analog Peripherals	Two, eight channel 12-bit analog-to-digital converter (ADC) and two 12-bit digital-to-analog converter (DAC)
Digital Peripherals	GPIO (x7), I2C (x1), UART (x4), SPI (x2), PWM (x10), CAN (x2), I2S (x1), SPDIF (x1), PDM (x1), and SAI (x1)
Debugging	JTAG/SWD debug port (accessible through the board's high-density connectors)
Dimensions	66.04mm x 25.40mm
Surface-mount	Castellated pins allow the board to be positioned as a surface-mountable module

Table 1: Portenta C33 Main Features

2.1 Microcontroller

Component	Details
R7FA6M5BH2CBG	32-bit Arm Cortex-M33 microcontroller, with a maximum operating frequency of 200 MHz
	2 MB of flash memory and 256 KB of SRAM
	Several peripheral interfaces, including UART, I2C, SPI, USB, CAN, and Ethernet
	Hardware-based security features, such as a True Random Number Generator (TRNG), a Memory Protection Unit (MPU), and a TrustZone-M security extension
	Onboard power management features that allow it to operate on low power
	Onboard RTC module that provides accurate timekeeping and calendar functions, along with programmable alarms and tamper detection features
	Designed to operate over a wide temperature range, from -40°C to 105°C, making it suitable for use in harsh environments

Table 2: Portenta C33 Microcontroller Features

2.2 Wireless Communication

Component	Details
ESP32-C3-MINI-1U	2.4 GHz Wi-Fi® (802.11 b/g/n) support
	Bluetooth® 5.0 Low Energy support

Table 3: Portenta C33 Wireless Communication Features

2.3 Security

Component	Details
NXP SE050C2	Secure boot process that verifies the authenticity and integrity of the firmware before it is loaded into the device
	Built-in hardware cryptography engine that can perform various encryption and decryption functions, including AES, RSA, and ECC
	Secure storage for sensitive data, such as private keys, credentials, and certificates. This storage is protected by strong encryption and can only be accessed by authorized parties
	Secure communication protocols support, such as TLS, which helps to protect data in transit from unauthorized access or interception
	Tamper detection features that can detect if the device has been physically tampered with. This helps to prevent attacks such as probing or power analysis attacks that attempt to access the device's sensitive data
	Common Criteria security standard certification, which is an internationally recognized standard for evaluating the security of IT products

Table 4: Portenta C33 Security Features

2.4 Ethernet connectivity

Component	Details
LAN8742AI	Single-port 10/100 Ethernet transceiver designed for use in industrial and automotive applications
	Designed to operate in harsh environments, with built-in features such as ESD protection, surge protection, and low EMI emissions
	Media Independent Interface (MII) and Reduced Media Independent Interface (RMII) interfaces support, making it compatible with a wide range of Ethernet controllers
	Built-in low-power mode that reduces power consumption when the link is idle, helping to conserve power in battery-powered devices
	Auto-negotiation support, which allows it to automatically detect and configure the link speed and duplex mode, making it easy to use in a variety of applications
	Built-in diagnostic features, such as loopback mode and cable length detection, which help to simplify troubleshooting and debugging
	Designed to operate over a wide temperature range, from -40°C to 105°C, making it suitable for use in harsh industrial and automotive environments

Table 5: Portenta C33 Ethernet Connectivity Features

2.5 External Memory

Component	Details
MX25L12833F	NOR flash memory that can be used for storing program code, data, and configuration settings
	SPI and QSPI interfaces support, which provide high-speed data transfer rates of up to 104 MHz
	Onboard power management features, such as a deep power-down mode and standby mode, that help to reduce power consumption in battery-powered devices
	Hardware-based security features, such as a one-time programmable (OTP) area, a hardware write-protect pin, and a secure silicon ID
	Auto-negotiation support, which allows it to automatically detect and configure the link speed and duplex mode, making it easy to use in a variety of applications
	Reliability-enhancing features, such as ECC (Error Correction Code) and a high endurance of up to 100,000 program/erase cycles
	Designed to operate over a wide temperature range, from -40°C to 105°C, making it suitable for use in harsh industrial and automotive environments

Table 6: Portenta C33 External Memory Features

2.6 Included Accesories

- Wi-Fi W.FL antenna (not compatible with Portenta H7 U.FL antenna)

2.7 Related Products

- ESLOV connector
- Arduino® Portenta H7 (SKU: ABX00042)
- Arduino® Portenta H7 Lite (SKU: ABX00045)
- Arduino® Portenta H7 Lite Connected (SKU: ABX00046)
- Arduino® Nicla Sense ME (SKU: ABX00050)

3 Specifications

3.1 Recommended Operating Conditions

Table 7 provides a comprehensive guideline for the optimal use of the Portenta C33, outlining typical operating conditions and design limits. The operating conditions of the Portenta C33 are largely a function of the operating conditions specified by its components.

Parameter	Symbol	Min	Typ	Max	Unit
USB Supply Input Voltage	V_{USB}	-	5.0	-	V
Battery Supply Input Voltage	V_{USB}	-0.3	3.7	4.8	V
Supply Input Voltage	V_{IN}	4.1	5.0	6.0	V
Operating Temperature	T_{OP}	-40	-	85	°C

Table 7: Recommended Operating Conditions

3.2 Current Consumption

The operating current of the Portenta C33 depends greatly on the application. Table 8 summarizes the board's power consumption in a defined application and conditions.

Parameter	Symbol	Condition	Typ	Unit
Board Current Consumption	I_{TOT}	$V_{BAT}=3.7V$, USB cable disconnected, all peripherals in sleep mode	-	-

Table 8: Power Consumption in a Defined Application and Conditions

Note: Current consumption measurements were taken under controlled laboratory conditions, with the Portenta C33 running a specific application and connected to a specific power source. Results may vary depending on the application and operating conditions.

4 Hardware

The core of the Portenta C33 is the R7FA6M5BH2CBG microcontroller from Renesas. The board also contains several peripherals connected to its microcontroller.

4.1 Block Diagram

An overview of the Portenta C33 high-level architecture is illustrated in Figure 1.

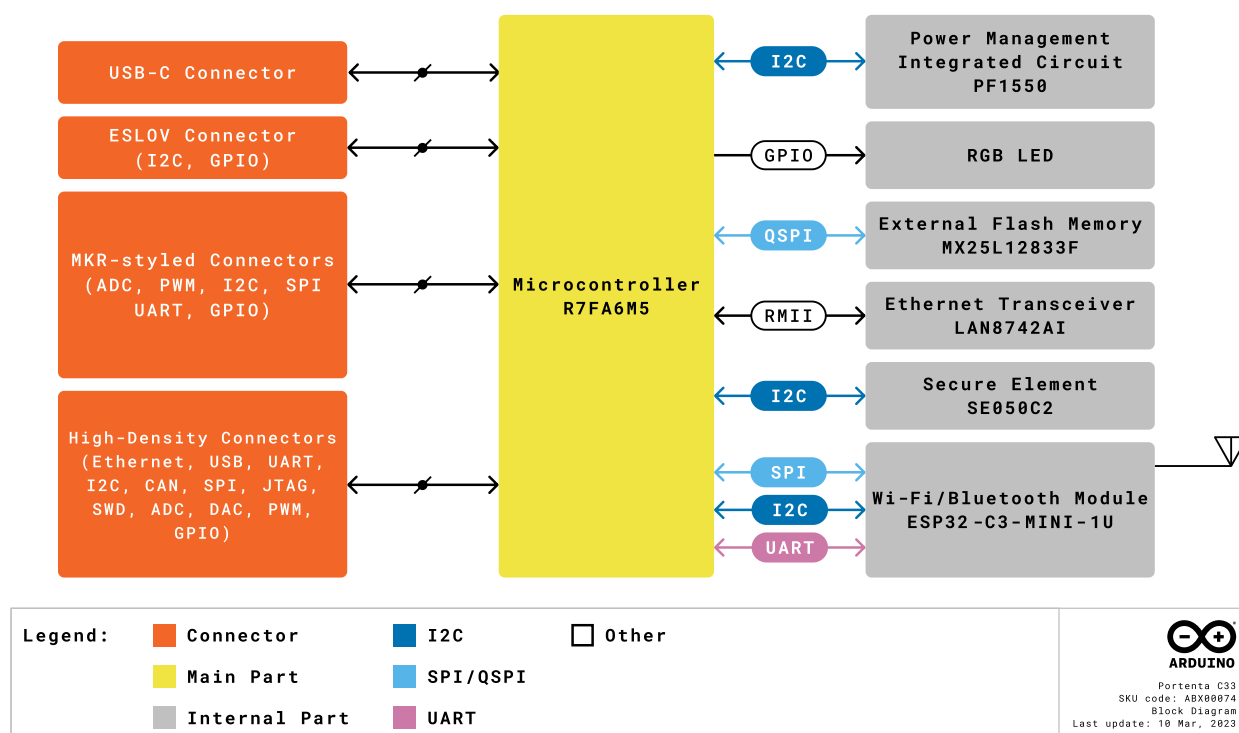

Figure 1. High-level architecture of the Portenta C33

4.2 Power Supply

The Portenta C33 can be powered through one of these interfaces:

- USB-C port
- 3.7V single cell lithium-ion/lithium-polymer battery, connected through the onboard battery connector
- External 5V power supply connected through the MKR-styled pins

Figure 2 shows the power options available on the board and illustrates its power architecture.

5 Certifications

5.1 Certifications Summary

Certification	Status
CE/RED (Europe)	Yes
UKCA (UK)	Yes
FCC (USA)	Yes
IC (Canada)	Yes
MIC/Telec (Japan)	Yes
RCM (Australia)	Yes
RoHS	Yes
REACH	Yes
WEEE	Yes
SRRC (China)	Yes
CCC (China)	Yes

5.2 Declaration of Conformity CE DoC (EU)

We declare under our sole responsibility that the products above are in conformity with the essential requirements of the following EU Directives and therefore qualify for free movement within markets comprising the European Union (EU) and European Economic Area (EEA).

5.3 Declaration of Conformity to EU RoHS & REACH 211 01/19/2021

Arduino boards are in compliance with RoHS 2 Directive 2011/65/EU of the European Parliament and RoHS 3 Directive 2015/863/EU of the Council of 4 June 2015 on the restriction of the use of certain hazardous substances in electrical and electronic equipment.

Substance	Maximum Limit (ppm)
Lead (Pb)	1000
Cadmium (Cd)	100
Mercury (Hg)	1000
Hexavalent chromium (Cr6+)	1000
Poly brominated biphenyls (PBB)	1000
Poly brominated diphenyl ethers (PBDE)	1000
Bis(2-Ethylhexyl) phthalate (DEHP)	1000
Benzyl butyl phthalate (BBP)	1000
Dibutyl phthalate (DBP)	1000
Diisobutyl phthalate (DIBP)	1000

Exemptions: No exemptions are claimed.

Arduino Boards are fully compliant with the related requirements of European Union Regulation (EC) 1907 /2006 concerning the Registration, Evaluation, Authorization and Restriction of Chemicals (REACH). We declare none of

the SVHCs (<https://echa.europa.eu/web/guest/candidate-list-table>), the Candidate List of Substances of Very High Concern for authorization currently released by ECHA, is present in all products (and also package) in quantities totaling in a concentration equal or above 0.1%. To the best of our knowledge, we also declare that our products do not contain any of the substances listed on the "Authorization List" (Annex XIV of the REACH regulations) and Substances of Very High Concern (SVHC) in any significant amounts as specified by the Annex XVII of Candidate list published by ECHA (European Chemical Agency) 1907 /2006/EC.

5.4 Conflict Minerals Declaration

As a global supplier of electronic and electrical components, Arduino is aware of our obligations with regards to laws and regulations regarding Conflict Minerals, specifically the Dodd-Frank Wall Street Reform and Consumer Protection Act, Section 1502. Arduino does not directly source or process conflict minerals such as Tin, Tantalum, Tungsten, or Gold. Conflict minerals are contained in our products in the form of solder, or as a component in metal alloys. As part of our reasonable due diligence Arduino has contacted component suppliers within our supply chain to verify their continued compliance with the regulations. Based on the information received thus far we declare that our products contain Conflict Minerals sourced from conflict-free areas.

6 FCC Caution

Any Changes or modifications not expressly approved by the party responsible for compliance could void the user's authority to operate the equipment.

This device complies with part 15 of the FCC Rules. Operation is subject to the following two conditions:

1. This device may not cause harmful interference
2. This device must accept any interference received, including interference that may cause undesired operation.

FCC RF Radiation Exposure Statement:

1. This Transmitter must not be co-located or operating in conjunction with any other antenna or transmitter
2. This equipment complies with RF radiation exposure limits set forth for an uncontrolled environment
3. This equipment should be installed and operated with a minimum distance of 20 cm between the radiator and your body.

English: User manuals for license-exempt radio apparatus shall contain the following or equivalent notice in a conspicuous location in the user manual or alternatively on the device or both. This device complies with Industry Canada licence-exempt RSS standard(s). Operation is subject to the following two conditions:

1. This device may not cause interference
2. This device must accept any interference, including interference that may cause undesired operation of the device.

French: Le présent appareil est conforme aux CNR d'Industrie Canada applicables aux appareils radio exempts de licence. L'exploitation est autorisée aux deux conditions suivantes:

1. L' appareil n' doit pas produire de brouillage

2. L'utilisateur de l'appareil doit accepter tout brouillage radioélectrique subi, même si le brouillage est susceptible d'en compromettre le fonctionnement.

IC SAR Warning:

English: This equipment should be installed and operated with a minimum distance of 20 cm between the radiator and your body.

French: Lors de l'installation et de l'exploitation de ce dispositif, la distance entre le radiateur et le corps est d'au moins 20 cm.

Important: The operating temperature of the EUT can't exceed 85 °C and shouldn't be lower than -40 °C.

Hereby, Arduino S.r.l. declares that this product is in compliance with essential requirements and other relevant provisions of Directive 2014/53/EU. This product is allowed to be used in all EU member states.
